Our Mission is Clear
To Clear the Air of Secondhand Smoke

Our mission is to promote clean indoor air as the national norm through prevention education programs, information dissemination, technical assistance, and training — Because everyone deserves the right to breathe smokefree air!

In reading this annual report, I am inspired by the commitment and the progress that ANR Foundation has made to ensuring that all people — regardless of their income, ethnicity, or geography — have the right to breathe clean air.

We thank you for your continued support. I recognize that facing Big Tobacco is a tough battle, and we need your help more than ever. Will you ask your landlords and neighbors to create protections so that secondhand smoke doesn’t drift into your homes, slowly but surely making your family sick? Will you encourage your employers to pass policies that protect all of your coworkers, whether they work in an office or on the loading docks, from inhaling secondhand smoke? And if you are fortunate enough to live and work in an environment that protects you from the dangers of secondhand smoke, will you help make sure that these protections aren’t rolled back by new products, being falsely advertised as safer?

I find it appalling that the tobacco industry is again targeting young adults and deliberately spreading misinformation that smoking e-cigarettes doesn’t harm others, because it does.

Today, ANR Foundation is fighting two fronts — getting half the country protected and making sure the other half doesn’t lose their protections. Because of where they live and the jobs available to them, more than half of the country lacks protection from unwanted secondhand smoke exposure. In areas where there are some smokefree laws, the creation of new, unregulated products have essentially rolled back these protections.
What upsets me more is the tobacco industry’s strategy of making e-cigarettes seem like a grassroots movement, when it’s not. They pay and promote individual retailers to sell their products under those individual retailers’ names. We, the people who have to live with the health consequences that these addictive and dangerous products impose on our families and our friends, we, must see through these marketing tactics and fight for our freedom and right to breathe smokefree air.

Regardless of where you live or where you work or how much money you make, you should not be subjected to deadly and cancerous secondhand smoke. It’s not fair and it’s not right. ANR Foundation is committed to protecting your right to breathing smokefree air and asks you to help us protect that right.

We thank our volunteer leaders, members, and institutional partners, who invest in what we do. Their gifts of time, talent, and resources make a significant difference in people’s lives and ensure that ANR Foundation will play a critical role as we look to a future that protects everyone’s right to breathe clean air.

Sincerely,

Kirk Kleinschmidt
Board President
100% Smokefree Laws Across the U.S.

Percent of Population Covered by Workplace, Restaurant, and Bar Laws:

100% Smokefree Workplaces:
States or municipalities with laws that include all workplaces (both public and private non-hospitality workplaces, including, but not limited to, offices, factories, and warehouses), that do not allow smoking in separately ventilated rooms, and do not include an employee number exemption greater than one.

100% Smokefree Restaurants:
States or municipalities with laws that do not allow smoking in attached bars or separately ventilated rooms and do not allow exemptions based on size, hours of operation, or age of admittance.

100% Smokefree Bars:
States or municipalities with laws that do not allow smoking in separately ventilated rooms.

Local laws passed: 101
State laws passed: 0

2014 ACCOMPLISHMENTS

• **49.2% of the population** is protected by 100% smokefree air policies covering workplaces, restaurants and bars, compared to 49.1% as of 12/31/13. An additional 418,174 people are now protected.

• **1,514 Colleges and Universities** are protected by smokefree policies (entire campus, both indoors and out), compared to 1,182 as of 12/31/13. Of the 1,514 Colleges and Universities, 1,014 of them have a completely tobacco free policy, versus 811 as of 12/31/13, and 587 prohibit the use of e-cigarettes anywhere on campus.

• **3,822 Hospitals and 233 Nursing Facilities** (4,055 combined) are protected by smokefree policies (covering the entire campus, both indoors and out), compared to 3,810 hospitals and 184 nursing facilities (3,994 combined) as of 12/31/13.

• **273 communities have Public Housing Authority policies** that restrict or prohibit smoking inside private units of public and/or affordable multi-unit housing in effect. Additionally, 15 cities and counties have municipal laws that prohibit smoking in 100% of private units of all specified types of market rate multi-unit housing.

• **2,881 Outdoor Venues** are protected by smokefree policies, compared to 2,697 as of 12/31/13. (Source: U.S. Tobacco Control Laws Database©)

**Databases and Infrastructure Development**

**U.S. Tobacco Control Laws Database©:** In 2014, the number of municipality records in the database increased to 4,953. There are over 12,000 laws in total in the database. Staff analyzed 853 new ordinances during 2014 that either increased the number of municipalities with tobacco control coverage or amended existing coverage. In addition, 268 laws were reanalyzed due to new or modified fields.

**Tobacco Industry Tracking Database and Related Web Site:** Program staff collected and cataloged 552 new documents for inclusion in the organization’s expanded Tobacco Industry Tracking Database©, and updated 27 existing ones.

**Infrastructure Development:** In 2014, programmatic use of Board Designated funds included: Supporting technical assistance; maintaining tobacco industry tracking systems; and travel to attend conferences and meetings to promote smokefree air.
Public Information and Technical Assistance
The organization informed and educated tobacco control leaders, the media, educators, parents, and the general public about secondhand smoke issues through the following services:

Website: Maintained with sister organization, ANR, this comprehensive website averaged 72k site visits (sessions) and 184k page views per month.

Newsletter: 6,600 newsletters and bulletins were distributed nationally.

Media Contacts: In tandem with its sister organization, ANR, the ANR Foundation was sought out as an expert resource by members of the press, resulting in 252 unique news clips, which were picked up by other news agencies a total of 1096 times, related to smokefree air and tobacco issues.

Secondhand Smoke Listservs: Staff participated in many state and/or issue-specific tobacco control listservs.

Direct Technical Assistance: Staff provided over 2000 instances of technical assistance to individuals from almost every state in the nation and the District of Columbia via phone and email, plus thousands more in larger venues, such as conferences and expos; in addition to conducting over 200 conference calls.

Presentations & Trainings: Staff participated/presented at conferences/meetings and facilitated/conducted trainings throughout the United States (24 events in all) on a variety of issues relating to tobacco control. ANRF hosted the 9th Clearing the Air Institute, September 28-October 1, attended by 124 of the nation’s leading and aspiring secondhand smoke educators and advocates.

Rapid Response Project: The organization continued to drive this critical project in 2014, thanks to grant funds from the Robert Wood Johnson Foundation. Through the project, ANRF provided timely strategic support to communities when they needed it most, through pass-through funding and direct technical assistance. Time sensitive support from ANRF bolstered communities as they worked to educate the public on smokefree issues. The project also offered vital support in their work to protect and implement existing smokefree policies. In 2014, ANRF staff directly supported smokefree educational efforts coast to coast, including special projects in: Alabama, Arkansas, Idaho, Indiana, Kentucky, Missouri, Mississippi, Nevada, North Dakota, and Pennsylvania.
Electronic Cigarettes, or e-cigarettes, are designed to mimic combustible tobacco cigarettes and contain varying levels of nicotine. E-cigarettes contain a battery, a heating element, and a nicotine cartridge. These cartridges typically contain a cocktail of other flavorings and ingredients. The process of using an e-cigarette is called “vaping”. While e-cigarettes are a billion dollar industry, and have been on the market since 2008, they remain unregulated by the Food and Drug Administration. Therefore, the exact contents of any given cartridge or brand, remain unknown.

Staff at ANRF receives and responds to frequent inquiries from the media, the public, and public health partners, about the so-called safety of e-cigarettes. In 2014, ANRF remained on the forefront of the issue. Our library staff maintained an online bibliography of the emerging scientific research on e-cigarette use and secondhand aerosol. As the number of studies grew, ANRF continued to share information widely with the public, working to counter misleading and blatantly false claims by e-cigarette manufacturers that ultimately put the public at risk.

E-cigarette companies claim that the aerosol emitted from e-cigarettes is harmless and contains only “water vapor.” However, the robust and growing body of published peer-reviewed research shows that the emitted aerosol contains nicotine; respiratory irritants; ultrafine particles (including metals and silicates); and carcinogens (including benzene, formaldehyde and lead).

The American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE) concluded that second-hand aerosol is a new form of indoor air pollution and that e-cigarettes should be regulated in the same manner as tobacco smoking. In 2014, ASHRAE updated its international ventilation standard for acceptable indoor air quality, requiring an environment free of tobacco cigarette smoke, secondhand aerosol, and secondhand cannabis or marijuana.

Claims about the safety of these unregulated devices have been hotly debated in both the media and the public health community. ANRF has been a strong voice for public health, maintaining the consistent message that exposure to e-cigarette aerosol is neither harmless nor risk-free, and that e-cigarettes and other electronic smoking devices should not be used in smokefree environments. www.no-smoke.org/getthefacts.php?id=824
Smokefree College Campus policies continued to be big news in 2014. The ANRF Smokefree and Tobacco-Free U.S. and Tribal Colleges and Universities List is recognized as the gold standard nationwide, and used to document and publicize policy trends in higher education institutions. In 2014, at least 104 media stories cited ANRF lists and the new report issued by Surgeon General also cited our smokefree and tobacco-free college campus data.

At the end of 2013, there were 1,182 college and university campuses on the ANRF policy list that met our 100% smokefree criteria. During 2014, technical assistance staff provided educational support and resources to student and health groups, as they investigated the benefits of smokefree campuses. At the close of 2014, the number of campus policies on the list had jumped to 1,514, an increase of 332 policies in just one year.

More than 1,000 of these campuses were entirely tobacco-free (including non-combustibles), compared to just over 800 at the same time in 2013. In addition, by the end of 2014, the first year in which ANRF tracked e-cigarette restrictions on college campuses, almost 600 of the smokefree campuses included the prohibition of e-cigarettes where smoking is prohibited.

This explosive trend toward 100% smokefree college campuses shows no signs of slowing down. Students, advocates, and school officials throughout the U.S. continue to seek up-to-date resources, lists, model policy language, and personalized technical assistance from staff at ANRF, as they consider the benefits of fully smokefree campuses.  
http://no-smoke.org/goingsmokefree.php?id=447
2014 saw continued nationwide growth in recognizing the benefits of smokefree housing among community members, housing providers, and decision makers, which in turn is increased the availability of smokefree living environments. Smokefree housing improves residents’ health and quality of life, and cuts costs for Housing Authorities, property owners, and management companies by increasing the ease of unit cleanup and minimizing complaints. Surveys show that the majority of multi-unit housing residents would prefer to live in smokefree buildings, and a growing number of housing providers are choosing to implement smokefree policies.

The ANR Foundation has been an influential player in the movement toward smokefree housing for all. ANR Foundation staff provided in-depth technical assistance and trainings on smokefree housing to North Dakota through that state’s Center for Tobacco Prevention and Control Policy, and conducted smokefree housing presentations at the ANRF Clearing the Air Institute. Staff developed resources to educate housing providers about the benefits of having a smokefree building and to address commonly heard concerns that may be a barrier to adopting a policy. Through our partnership with the Roswell Park Cancer Institute, staff provided in-depth assistance to select communities in several states to increase support for, and the availability of, smokefree housing. Staff attended the National Healthy Housing Conference to present a poster session about the Roswell Park project. ANR Foundation staff served on the Steering Committee of the California Healthy Housing Coalition to help increase connectivity between the healthy housing and smokefree housing movements.

The ANR Foundation fields daily requests for assistance from people who are suffering in their own homes from drifting secondhand smoke. Staff provides education and empathy to empower these citizens to join with neighbors, public health officials, and policymakers to advocate for a healthier environment for all families, regardless of where they live.

Read more about smokefree housing: http://www.no-smoke.org/goingsmokefree.php?id=101
Since our 2013 report, the number of smokefree casinos and other gambling facilities has risen from approximately 500 to over 800. Twenty states, Puerto Rico, and the US Virgin Islands include casinos in their smokefree workplace laws; however, these laws only protect 10% of the 1.7 million commercial casino employees. None of the large gambling states such as Nevada, New Jersey, Pennsylvania, Mississippi, and Indiana are smokefree. Additionally, there are 493 Indian gaming operations in the United States, providing 612,000 jobs nationwide; only a handful of these facilities are 100% smokefree.

ANRF has been actively engaged in educating the general public, its public health partners, and gaming industry interests about the benefits of smokefree environments and the public demand for smokefree casinos. In order to create awareness and discussion around the importance of smokefree casinos for worker health and patron preference, staff met with leadership of the American Gaming Association (AGA), attended the National Council of Legislators from Gaming States (NCLGS) meeting, and staffed our “Breathe Easy with Smokefree Casinos” educational booths at a variety of commercial and tribal gaming expos. Prior to our engagement and consistent presence at gaming meetings and expos, the issue of smokefree was ignored or misrepresented. ANRF has changed the discussion and made smokefree a more prominent topic.

ANRF led a smokefree casinos workshop at the smokefree Horseshoe Cincinnati to connect advocates and casino workers actively working on this issue around the country. This was part of our effort to highlight successful examples and cultivate positive, constructive smokefree dialogue within the gaming industry.

We continue to put a face on the issue by sharing worker and player testimonials in support of smokefree casinos. You can see those and read more information about this topic at www.smokefreecasinos.org
There are 562 federally recognized Indian tribes, bands, nations, pueblos, rancherias, communities and Native villages in the United States. Approximately 229 of these are located in Alaska and the rest are in 33 other states. Tribes are sovereign nations and as such, exempt from statewide smokefree laws. As smoking rates have declined in the general US population, the smoking prevalence among American Indians remains the highest of any racial/ethnic group. Because tribal casinos are also exempt from statewide smokefree laws, the tobacco industry has increasingly targeted tribal casinos.

There is a great need for tribal specific resources, materials, technical assistance, education, and support. To help fill this gap, the ANRF has effectively partnered with tribal nations to support their quest for smokefree environments for all citizens.

Over many years, ANRF supported the Cheyenne River Sioux Nation in their pursuit of a commercial tobacco-free ordinance. In 2014, they successfully passed a Clean Air Act making their reservation completely smokefree, including e-cigarettes, and instituting a 50 foot smokefree distance from all entrances and windows. This policy also includes gaming facilities and veteran/fraternal clubs. Their fundamental use of traditional tobacco (cansasa) is recognized by this ordinance, thereby allowing the ceremonial use of traditional (not commercial) tobacco indoors. Most ceremonies are in traditional enclosures, but on occasion will take place in public or workplaces indoors. ANRF staff conducted several educational presentations for Alaska tribes and provided technical assistance for leadership development. Currently, 108 of the 229 federally recognized Alaska tribes have passed smokefree workplace resolutions thereby protecting tribal members and the public from secondhand smoke. In addition, four tribes in North Dakota (Great Plains Region) have partnered with ANRF for on-going resources, training, and support for their Smokefree Tribal Casinos project. We have also partnered with a large tribe in Michigan to assist their efforts for commercial tobacco-free policies. ANRF and the Navajo Nation continued to partner and build momentum, toward achieving policy change for smokefree environments.

Staff at the ANRF continue to provide support, empowerment, and resources to tribal nations working on this critical health issue. Through this productive dialogue, staff continue to build stronger relationships with tribal nations in order to work together for a healthier future free from commercial tobacco smoke.

The ANRF Board of Directors meets twice annually. Board member responsibilities are to provide oversight and approval on fiscal matters, including the annual budget and long-term investments, and oversight and advice on programmatic direction.
Mark Pertschuk
In gratitude for your exemplary service and ongoing dedication to nonsmokers’ rights.
We tip our hats to you!

Staff Member: 1985 – 1995
Serving as Legislative Director, Associate Director, Co-Director, Executive Director, and General Counsel

Board of Directors: 1995 – 2014
Serving as Board President from 1996 – 2007, and Nominating Committee Chair from 2007 – 2014

At the June Board meeting, we said goodbye to longtime board member, friend, and smokefree advocate, Mark Pertschuk. Mark held many roles at the ANR Foundation and protected countless lives over three decades of service and dedication. Although he has retired from the Board, Mark remains an active supporter of the organization, and we are grateful for his leadership, guidance and service to smokefree air.

Cynthia Hallett (ANR/F Executive Director) presents Mark Pertschuk with an award for three decades of exemplary service.

Former ANR/F Executive Director Julia Carol (3rd from right) and other current and former staff members attend the June Board meeting to honor Mark.
